

DecodeLabs Data Analytics Internship

Project 1: Data Cleaning & Preparation

Objective:

Clean and prepare the raw dataset to improve data quality and ensure reliable analysis.

Dataset Details:

Rows: 1200

Columns: 14

Data Cleaning Tasks Performed:

1. Missing Value Identification

- Checked the dataset for missing or null values.
- Identified missing values in the CouponCode column.

2. Duplicate Check

- Verified duplicate Order IDs.
- Duplicate IDs found: 0
- Duplicate records found: 0

3. Data Format Validation

- Checked date columns for consistency.
- Verified date formats were correct.

Tools Used:

- Microsoft Excel

Conclusion:

The dataset was cleaned and validated successfully. Missing values were handled, duplicate records were verified, and data formats were checked to ensure data integrity before analysis.
